

ePricer RPC model

The message structure can be mapped to HTTP, JMS, or AMQP

ServiceId - for routing

EndpointId & VersionId - determine remote RPC endpoint to invoke

Exceptionable - Response: false / true - service contract includes business rule exceptions

Status - Response: Success / Error - determines payload type

Payload gets de-serialized into the response data structure or into BusinessException (checked) depending on Status

BusinessRuleException:

- Code
- Message
- Parameters:
 - ID:Value
